endogenous receptor. Cytokine receptor sequences are useful as probes for detecting levels of the cytokine receptor in patients suspected of having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for isolating DCRS proteins and peptides, to screen expression libraries for particular expression products, to raise anti-idotypic antibodies and for detecting or diagnosing various immunological conditions related to expression of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          the physiology or development of a cell or tissue culture cells. A purified DCRS is useful as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to production of antibody to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mammalian receptor proteins related to cytokine receptors, useful regulating cell development and for diagnosis and treatment of unological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Calcium phosphorylation site"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 209;
The present invention provides the protein and coding sequences of 3 variants of a human cytokine receptor. The sequences can be used in the diagnosts, prevention and treatment of immune diseases, including psoriasis, cancer, chronic/life-threatening infections, rheumatoid arthritis, multiple sclerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is variant 1 of the invention.
                                                                                                                                                                                  New nucleic acid encoding soluble cytokine receptor, useful for diagnosis and treatment of e.g. immune disease, also related protein and antibodies \,

tissue factor precursor - bovine

N.Alternate names: coagulation factor III

C;Species: Bos primigenius taurus (cattle)
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text.
C;Accession: JQ1319
C;Accession: JQ1319
A;Tissue Biophys. Res. Commun. 181, 1145-1150, 1991
A;Title: cDNA and amino acid sequences of bovine tissue
A;Reference number: JQ1319; MUID:92109720; PMID:1764065
A;Accession: JQ1319

SERVES AS AN ACCESSORY CHAIN ESSENTIAL FOR THE ACTIVE IL-10 RECEPTOR COMPLEX AND TO INITIATE IL-10-INDUCED SIGNAL TRANSDUCTION EVENTS.
SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

"Interleukin (IL)-22, a novel human cytokine that signals through the

interferon receptor related proteins CRF2-4 and IL-22R.";

J. Biol. Chem. 275.31335-31339(2000).

-1- FUNCTION: RECEPTOR FOR IL-10 AND IL-22. SERVES AS AN ACCESSORY

CHAIN ESSENTIAL FOR THE ACTIVE IL-10 RECEPTOR COMPLEX AND TO

INITIATE IL-10-INDUCED SIGNAL TRANSDUCTION EVENTS.

-1- SUBCELULAR LOCATION: Type I membrane protein.

-1- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

-1- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                        [3]

THE [TE:VIIA] COMPLEX ACTIVATES FACTORS IX OR X BY SPECIFIC LIMITED PROTOLYSIS. TF PLAYS A ROLE NORMAL HEMOSTASIS BY INITIATING THE CELL-SURFACE ASSEMBLY AND PROPAGATION OF THE COAGULATION PROTEASE CASCADE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Biol. Chem. 267:2802-2809(1992).
                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: IFN RECEPTORS ARE PRESENT IN ALL TISSUES AND EVEN ON THE SURFACE OF MOST IFN-RESISTANT CELLS.

PTM: PHOSPHORYLATED ON TYROSINE RESIDUES BY TYK2 TYROSINE KINASE.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    230 LTPHSSYCVVAEIYQPMLDRRSQRSEERCV 259
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RAY CRYSTALLOGRAPHY (2.35 ANGSTROMS)
                                                                                                                                                                                                                                                                                FUNCTION: INITIATES BLOOD COAGULATION BY FORMING A COMPLEX WITH CIRCULATING FACTOR VII OR VIIA. THE [TE:VIIA] COMPLEX ACTIVATES FACTORS IX OR X BY SPECIFIC LIMITED PROTOLYSIS. TF PLAYS A ROLE NORMAL HEMOSTASIS BY INITIATING THE CELL-SURFACE ASSEMBLY AND PROPAGATION OF THE COAGULATION PROTEASE CASCADE.

SUBSCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: BRAIN, HEART.

SIMILARITY: BELONGS TO THE TISSUE FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  nge bending within the cytokine receptor superfamily 2.4 A crystal structure of the extracellular domain
